Item Hotword Metrics

Arctera Surveillance · Sample Reference Report · Enhanced Reporting API

REPORT DESCRIPTION The Item Hotword Metrics report counts how frequently each hotword (keyword or phrase) was matched in captured items, grouped by hotword and by hotword set (category), and broken down by review status (relevant, irrelevant, unreviewed). Use it to see how frequently hotwords are being captured by searches and how their matches are distributed — marked relevant or irrelevant by a human reviewer, or classed by Intelligent Review (machine learning) as unreviewed-relevant or unreviewed-irrelevant.
